health care

As we pay our obligations, the state should pay theirs.

we make adjustments in our lives but honor our commitment.

As we pay our way we trust the employers to pay their share.

Underfunding does not solve our problem.

We would not have the money to pay other bills.

Health care becomes an important issue as you get older.

Ask yourself if medical is important to your well being, and in the long run health issues can cost the state more.

If we can't pay insurances are dropped. People don't get check ups and the state social services

might have to pick up the cost. Pocket A or pocket B. It would be nice to be healthy

and not need serious medical attention.

Thank you.
